1957 Hemerocallis Introductions

PINK SPRITE

\$15.00

A lovely sun resistant medium pink self with an apple green throat of heavy substance and overlapping petals. Medium in size and height with multiple branching. 35 buds and showing many blooms at once. Midseason. 30 inches.

Again it gives me great pleasure to introduce another hemerocallis originated by my neighbor, Mrs. Frank Lucas. Those of you who have visited Mrs. Lucas' gardens know what lovely things she has developed and there are a number of these hems that should prove very popular.

ROSE SHADOWS (Lucas)

\$10.00

This hem creates quite a lot of interest because of its unusual color and form, being a deep mauve rose self and very recurved. The petals are wide and overlapping and are sun resistant. The throat is greenish yellow. It is nicely branched and proliferates. Early midseason. 36 inches.

PREVIOUS INTRODUCTIONS AND REGISTRATIONS

CORAL RUFFLES (Lucas)

\$6.00

Beautifully formed, this ruffled triangular 5½ inch flower of deep coral pink is exquisite. It is a self with raised midrib of cream shading into a deep green throat. Nicely branched. An open recurving flower of fine substance. Midseason. 40 inches.

CRIMSON GLORY

\$5.00

The name is most descriptive of this smoothly finished red flower of firm substance which is open and recurved. The petals and sepals are identical in color and are broad and full with ruffled edges. The color extends down into an inconspicuous yellow throat. The stalks are strong with many branches. The growth is vigorous. 42 in. E.M. Dor.

DARK MAGIC

\$3.00

Large open flower of dark velvety red with broad petals and sepals. The small cup is deep golden yellow. Well branched with strong stems. The flowers have heavy substance and are sun resistant. 40 in. L.M. Dor.

GAY FLUSH

\$4.00

This gaily colored flower helps usher in the regular season. The 5½ inch ruffled blooms have a pale orange ground heavily flushed with rose with green throat and is entirely different. The shape is triangular. Early midseason. 45 inches.

HONOR GUARD**\$5.00**

A stately plant with heavy substantced, crimped star shaped 6 inch blooms of a soft pale yellow that goes all the way down into the throat. Strong sturdy stalks carrying many blooms. Midseason. 50 inches.

KENTUCKY COLONEL (Lucas)**\$10.00**

Large brilliant crimson red with illusive darker overcast. The small yellow green throat is lovely. The petals are crepy and velvety and the sepals twist. Erect in growth. An aristocrat among hems. Midseason. 34 inches.

LORELEI**\$2.00**

Charming and different, this much recurved lemon-chrome of heavy wax-like substance is an eye catcher. The extreme recurving of both petals and sepals, of even width, is very distinctive. 40 in. M.L. Dor.

MAHOGANY**\$6.00**

A recurved rounded flower of unusual form that defies the sun and looks as fresh in the evening as when first opened. A velvety mahogany red self with slightly darker flush above the small golden throat that goes to green. There is a minute pencil stripe of gold around the recurved petals and sepals. 40 blooms to scape. Midseason. 42 inches.

PASTEL TWIST (Lucas)**\$12.00**

This lovely flower defies description as it twists, curls and pinches in a most unusual manner and has been the center of interest from its first blooming. The color is soft yellow and has an overall suffusion of delicate pink with light henna on either side of the strongly inverted V midrib of the petals and on the sepals and the throat is green. The 5 in. flowers have heavy non-fading substance. Every flower is identical in that the sepals recurve like a ram's horns. Late midseason. 36 inches.

PICCADILLY**\$5.00**

This gay and exciting 5½ inch flower has been much admired, being a semi-spider. The twisted and curled flowers are a lovely canary with a bright red suffusion along the outer petals and sepals; heavier on petals, giving the effect of a bicolor. Late midseason. 34 inches.

PINK OPAL**\$7.00**

Exquisite wax-like blossoms of light coral pink, with broad petals that are reminiscent of full sails. Withstands all kinds of weather. The throat is cream blending into cool green. A handsome 5 inch flower with firm substance and adequate branching must be established to give best blooms. Late midseason. 38 inches. Rebloomer.

RED TOP**\$1.00**

For sheer brilliance this *Hemerocallis* is outstanding. The flowers are star shaped, a bright red self except for an ivory-white midrib on both petals and sepals. Inconspicuous throat. Very floriferous and the large blooms have heavy substance. Good branching. 36 in. M. Dor.

ROMAN GOLD**\$8.00**

This very heavy substed flower is a deep orange self with copper suffusion with green deep in the throat. The petals and sepals are wide and overlapping and the edges are curled. Sun and rain resistant. Medium in size but most outstanding. Late midseason. 40 inches.

ROYAL RUSSET**\$4.00**

A brilliant and colorful flower in the garden. A deep orange red self with a heavy overall cast of scarlet red. The wide open 5½ inch triangular bloom has good substance that does not fade in the hottest sun. The deep green throat is very lovely. Late midseason. 36 inches.

RUSTY GOLD**\$6.00**

Wide open, heavy substed, crepe like diamond dusted deep gold with a faint suffusion of red, though the effect is a self of the richest color. The 4½ inch flowers are weather resistant and are very handsome. Midseason. 36 inches.

VALLEY ROSE**\$2.50**

A large rounded open flower of mellow rose that has a lavender cast after the sun is on it and is even lovelier in the afternoon. Has a small green throat. Both the petals and sepals are wide with exceptionally heavy substance. 38 in. M.L. Dor.

YELLOW BANKS (Lucas)**\$8.00**

This is the original name of our town where our ancestors were among the early settlers. From its first blooming this luscious creamy yellow self has interested us because of its unusual color and heavy velvety substance. It is triangular in form with many 5 in. blooms to a scape. Early midseason. 40 inches.

YELLOW HARMONY**\$6.00**

The name is most descriptive of this full wide open flower of varying yellow shades, of distinctive shape and vellum texture. The 6 in. blooms have a raised midrib on the petals that is almost white. Sturdy well branched stalks with well substed flowers that withstand sun. Early midseason. 44 inches.
